# OSRAM LT Q99G.01 **Datasheet**

# Chip LED 0603

# LT Q99G.01

The Chip LED 0603 is the product of choice for status indication in electronics. The small package size allows compact designs within 7-segment displays and simple backlighting applications in dashboards and switches.

#### **Applications**

- Appliances & Tools
- Display Backlighting
- Factory Automation
- Home & Building Automation

- Projection & Display
- Static Signaling
- Transportation

#### **Features**

- Package: SMT package 0603, clear epoxy
- Chip technology: InGaN on Sapphire
- Typ. Radiation: 150°
- Color: λ<sub>dom</sub> = 528 nm (• true green)
- Corrosion Robustness Class: 2B
- ESD: 1 kV acc. to ANSI/ESDA/JEDEC JS-001 (HBM)

#### **Type Designation System**

#### **Notes**

The evaluation of eye safety occurs according to the standard IEC 62471:2006 (photo biological safety of lamps and lamp systems). Within the risk grouping system of this IEC standard, the device specified in this data sheet fall into the class exempt group (exposure time 10000 s). Under real circumstances (for exposure time, conditions of the eye pupils, observation distance), it is assumed that no endangerment to the eye exists from these devices. As a matter of principle, however, it should be mentioned that intense light sources have a high secondary exposure potential due to their blinding effect. When looking at bright light sources (e.g. headlights), temporary reduction in visual acuity and afterimages can occur, leading to irritation, annoyance, visual impairment, and even accidents, depending on the situation.

Subcomponents of this device contain, in addition to other substances, metal filled materials including silver. Metal filled materials can be affected by environments that contain traces of aggressive substances. Therefore, we recommend that customers minimize device exposure to aggressive substances during storage, production, and use. Devices that showed visible discoloration when tested using the described tests above did show no performance deviations within failure limits during the stated test duration. Respective failure limits are described in the IEC60810.

#### Disclaimer

#### Attention please!

The information describes the type of component and shall not be considered as assured characteristics. Terms of delivery and rights to change design reserved. Due to technical requirements components may contain dangerous substances.

For information on the types in question please contact our Sales Organization.

If printed or downloaded, please find the latest version on our website.

#### **Packing**

Please use the recycling operators known to you. We can also help you – get in touch with your nearest sales office. By agreement we will take packing material back, if it is sorted. You must bear the costs of transport. For packing material that is returned to us unsorted or which we are not obliged to accept, we shall have to invoice you for any costs incurred.

#### Product and functional safety devices/applications or medical devices/applications

Our components are not developed, constructed or tested for the application as safety relevant component or for the application in medical devices.

Our products are not qualified at module and system level for such application.

In case buyer – or customer supplied by buyer – considers using our components in product safety devices/ applications or medical devices/applications, buyer and/or customer has to inform our local sales partner immediately and we and buyer and /or customer will analyze and coordinate the customer-specific request between us and buyer and/or customer.

#### Glossary

- Brightness: Brightness groups are tested at a current pulse duration of 25 ms and a tolerance of ±11 %.
- 2) Reverse Operation: This product is intended to be operated applying a forward current within the specified range. Applying any continuous reverse bias or forward bias below the voltage range of light emission shall be avoided because it may cause migration which can change the electro-optical characteristics or damage the LED.
- 3) Wavelength: Wavelengths are tested at a current pulse duration of 25 ms and a tolerance of ±1 nm.
- 4) Forward Voltage: Forward voltages are tested at a current pulse duration of 1 ms and a tolerance of ±0.1 V.
- 5) **Thermal Resistance:** Rth max is based on statistic values  $(6\sigma)$ .
- 6) Typical Values: Due to the special conditions of the manufacturing processes of semiconductor devices, the typical data or calculated correlations of technical parameters can only reflect statistical figures. These do not necessarily correspond to the actual parameters of each single product, which could differ from the typical data and calculated correlations or the typical characteristic line. If requested, e.g. because of technical improvements, these typ. data will be changed without any further notice.
- Characteristic curve: In the range where the line of the graph is broken, you must expect higher differences between single devices within one packing unit.
- Tolerance of Measure: Unless otherwise noted in drawing, tolerances are specified with ±0.1 and dimensions are specified in mm.
- 9) Tape and Reel: All dimensions and tolerances are specified acc. IEC 60286-3 and specified in mm.
